

Assessment planning

Learning goals	Objectives/ Outcome	Educational opportunities	Assessment measures	Results	Possible explanations	Action taken
What will students learn? How will students be different after completing this program?	What will student know or be able to do? Focus on measurable, concrete outcomes.	Which courses include these as primary objectives which courses introduce or reinforce objectives?(if any)	How will you measure whether or not students achieved these outcomes and at what level?	What did the evidence show?	What do you think led to these results?	What changes to the program or particular units will the assessment team make based on these results?
